

Dev Journal Feature Ideas

Must

Tags and Tags page (3) - Necessary

Whenever a note, calendar element, or task is added, the user can add a tag (category) to it. These can then be searched showing either a chronological or priority order.

Importance (4) - Necessary

Notes, tasks, and Calendar events can be given priority (high, medium, or low), by default, they can be low. The high priority elements can be pinned.

You should be able to assign a priority number and sort the list by those numbers. So you could sort it from most to least important.

Built-in Markdown editor (1) - Necessary

This is necessary for our app to work (why?). We want it to feel easy to use and clean

Should

Customizable Journal Template (4)

Allow user to add a template with custom formatting and content (similar to Notion)

Alt idea:

Ability to change colors and fonts

Ability to add a gif/image in certain area

Progress Bar for Tasks (5)

Depends on the tags

Might be related to time-tracking

Enhancement: Have multiple ways of displaying it

Calendar with journal entries on it (3)

Alt idea: Way to date the logs, and also increment key issues/projects. Calendar is built off that data. Definitely a button for a that view (can use mini project)

Ability to export to pdf/export data so we can import it to another place (or have auth system) (2)

Could

Ability to search for specific journals, maybe by key words (1)

Ability to pin journals at the top

Ability to categorize journal (1)

Shouldn't be too bad with tags feature included

Ability to share journal

Ability to have markdown or latex

Ability to set goals and mark goals as done (1)

Extension of progress bar?

Small code editor (maybe ability to run as well)

Git integration

Search for keywords and tags (1)

Extension of search specific journals
